UNDERSTANDING OF PROJECT OBJECTIVES & SCOPE OF WORK

U.S. Wheat Associates (USW) supports two baking schools in the Caribbean -- INFOTEP Baking School in the Dominican Republic and Jamaica Baking School at the University of Technology in Jamaica -- as part of its strategy to develop export markets for U.S. wheat producers by enhancing technical capacity and improving the quality and consistency of wheat-based food products in the region. Over the past twenty years, USW has provided instructor-led training, curriculum development, technical courses, baking demonstrations, and provision or facilitation of specialized equipment to these baking schools. The baking schools in turn manage and implement workforce development and industry training programs which cater to local bakers, food manufacturers, millers, and related professionals.

USW is seeking an experienced consultant to evaluate the impact of this programming and assess the long-term programming and future engagement with the baking schools as USW considers assistance in future years. This is the first evaluation conducted for each of these activities. The consultant will work closely with USW to design and conduct an evaluation, and produce a final evaluation report using a mixed-methods evaluation approach to achieve the following **evaluation objectives**:

- Assess the overall effectiveness of USW efforts to improve the quality of wheat-based foods in Jamaica and the Dominican Republic.
- Analyze the relevance, sustainability, and impact of USW-supported training and capacity building activities.
- Examine the health and medium and long-term viability of the educational institutions in which these baking schools are housed.
- Demonstrate the ratio of additional U.S. export sales supported relative to MAP/FMD/RAPP program funding.
- Identify challenges and opportunities related to each country's wheat-based food production.
- Provide learnings, actionable insights, and recommendations to inform future USW programming.

The consultant will conduct the evaluation between May 2026 and October 2026, with a final report to be delivered no later than 31 October 2026.

ABOUT TRADEMOVES & OUR CAPABILITIES

Established in 2006, TradeMoves is a certified women-owned small business working at the intersection of trade operations and trade policy. Our team provides technical trade expertise and services to agriculture, processed food, and consumer product clients to support their export priorities and cross-border initiatives. We also partner with a network of experts in the regulatory, evaluation and analytics space to offer full-service capabilities to support export promotion including market assessments, program evaluations, regulatory research, and strategic planning. TradeMoves was awarded the President's "E" Award for Export Services in 2020. Clients include companies, USDA Cooperators and State & Regional Trade Groups (SRTGs). Examples of current and former Cooperator and SRTG clients include U.S. Dairy Export Council (USDEC), National Confectioners Association (NCA), Organic Trade Association (OTA), USA Pulses, U.S. Grains Council (USGC), Food Export, Western United States Agricultural Trade Association (WUSATA) and USA Poultry and Egg Export Council (USAPEEC).

TradeMoves' team for this project includes two experts with significant international program evaluation experience as well as an experienced international project manager. In addition to the project team, TradeMoves offers a bench of multidisciplinary researchers and analysts to support a mixed-methods evaluation approach involving desk review, informational interviews, and data analysis. Our team is well positioned to offer USW a wide scope of capabilities to support the evaluation including:

- Proficiency in mixed-method evaluation methods using rigorous quantitative and qualitative techniques.
- Competencies in econometric and statistical analysis with a deep understanding of cross-border trade data from the US and other country sources
- Knowledge in designing and implementing capacity building programs around the world, including in implementing monitoring and evaluation plans to assess impact and organizational capacity improvements.
- Experience with projects in Latin America and the Caribbean including but not limited to Costa Rica, Venezuela, Colombia, Mexico, El Salvador, Honduras, and Haiti.

For more information on our previous work experience and samples of previous studies, please see **Annex A**.

APPROACH AND METHODOLOGY

I. Evaluation Methodology

TradeMoves proposes a mixed-methods approach to address the goals and requirements of the evaluation. The evaluation design is centered around answering USW’s evaluation objectives, specifically:

Objective	
1	Assess overall effectiveness of USW's efforts to improve quality of wheat-based foods through training, technical assistance, and institutional support to both baking schools
2	Analyze the relevance, sustainability, and impact of USW-supported training and capacity-building activities
3	Examine the health and medium/long-term viability of the educational institutions housing the baking schools
4	Identify market constraints and opportunities related to wheat-based food production in both countries, aligned with USW's approved strategic plan
5	Describe additional export sales achieved, including ratio of additional export sales relative to MAP/FMD/RAPP program funding

We will collect and analyze qualitative and quantitative data from a wide range of sources to provide an integrated assessment of program effectiveness, strengths, weaknesses, and recommendations for improvements in future programs in each country. Below, we elaborate on the data collection methods and the types of analyses required across all evaluation objectives. We also map each of these methods and analyses to their corresponding objectives for easy reference in an [Evaluation Matrix \(Table 1\)](#).

Data Collection Methods

TradeMoves will gather the following information as key inputs to analyze performance against each objective:

1. Program documentation review: We will review all key documentation shared by USW, including but not limited to the following for the two schools:
 - USW’s strategic plan
 - Program and instructor timelines
 - Course curriculum
 - Annual and other progress reports
 - Technical assistance/training readouts
 - Training participant lists
 - Equipment purchases
 - Program invoices
 - List of suggested interviewees and stakeholders
 - Baking school documentation (enrollment numbers, curriculum, reports, etc.)
 - U.S. wheat export sales data
 - Training participant sales or other monitoring data (surveys, etc.) post-training
 - Other documents as relevant.

The document review will provide valuable context for developing data collection tools, such as key informant interview guides, observational checklists (if appropriate), stakeholder surveys, etc. The review will also contribute key quantitative and qualitative data and information for assessing the scope, scale and timing of USW support, its effectiveness, potential export sales data, and other contextual information.

2. Key informant interviews (KIIs) and other in-depth sessions will be used to gather stakeholder feedback and assessment and will target alumni, school administrators, instructors, company leaders, and others. We anticipate interviews with an estimated 10-15 stakeholders in each country as well as interviews with USW staff. We will use semi-structured interview guides to ensure we ask questions and probe in the right areas to address the relevant evaluation objectives. We propose two separate trips, one to Jamaica and one to the Dominican Republic, to conduct interviews in person. Interviews in the Dominican Republic will be conducted in Spanish.
3. Direct Observations of the baking schools’ facilities, including classrooms and USW-provided equipment, will help inform an assessment of the overall health of the baking institutions and is in conjunction with KIIs and any review of shared documentation from the institutions. We understand there are currently no baking seminars scheduled. If seminars are scheduled in June or July, we will endeavor to plan our visit in order to observe training as well.

4. Survey (optional): Although not requested by USW as part of the evaluation RFP, a survey of alumni could supplement targeted in-person interviews and provide a more comprehensive and quantifiable source of program participant perspectives on the strengths, weaknesses, and utility of courses.
5. Publicly available primary source data: TradeMoves will also collect economic information about U.S. wheat sales to Jamaica and the Dominican Republic from official sources including USITC Dataweb, USDA, and official statistics from the Dominican Republic National Office of Statistics, the Customs Agency of the Dominican Republic, the Jamaica Customs Agency, and other databases as available.

Qualitative and Quantitative Analyses

The following is an overview of the types of analyses we will employ in conducting the evaluation.

1. Qualitative Content and Thematic Analyses: For each country's program we will conduct qualitative analyses of programming documents, KII notes, and observational data to identify common patterns and themes, areas of divergent perspectives and narratives, important contextual information, program facts, and nuances. We will analyze each source separately and together to triangulate findings and strengthen their validity.
2. Kirkpatrick Model and Contribution Analysis: We will use the Kirkpatrick Model as an organizing framework for assessing the effectiveness of the USW-supported baking school courses, while linking training outcomes to export sales through a broader contribution analysis. The four level [Kirkpatrick Model](#) is an evaluation technique for assessing: whether participants perceived as useful and relevant to their work (level 1); whether they learned new knowledge and skills (level 2); whether they applied the new skills and knowledge on the job (level 3); and whether these changes in practices improved the businesses (level 4). Based on the analysis under this model, we will be able to translate USW's inputs into the effects on trainee learning and behavior change.

	Levels 1 and 2	Level 3	Level 4
Aim	Understand participant reaction and learning	Assess behavior change	Examine results
Relevance	Whether trainees, instructors, and industry stakeholders viewed USW-supported courses as relevant, practical, and technically valuable; and whether the courses improved understanding of wheat quality, flour functionality, baking methods, product consistency, and the use characteristics of U.S. wheat.	Whether trainees, alumni, instructors, bakeries, millers, or food manufacturers applied USW-supported knowledge in their work.	Whether applied learning contributed to improved product quality, stronger industry confidence in U.S. wheat, expanded use of U.S. wheat-based ingredients, new or improved baked goods, or increased purchases of U.S. wheat or flour where data are available.
Assessment	Will help determine whether USW support has improved the technical skills and capacity of the schools and their trainees.	May include changes in flour selection, production processes, product formulation, quality control, use of U.S. wheat classes, or communication between bakers and millers about flour specifications. Evidence at this level is especially important because it is the bridge between classroom-based training and market behavior.	Results will be compared with available export-sales and program-funding data to assess the USW's contribution to additional export sales and to estimate export impact relative to MAP/FMD/RAPP funding.

3. Organizational Capacity Assessment and Sustainability Frameworks: To examine the health and viability of each school and the medium to long term viability of the host schools, we will analyze interview responses from school administrators, instructors and program participants. We will compare this with information and data found in institutional documents such as annual plans, course offerings, and school performance reports that are publicly available or provided to us. To guide our assessment of the institutions, we will leverage elements of existing organizational capacity assessment tools to inform our analysis of their health and viability. These tools help categorize and assess core functions of successful and sustainable institutions, such as their financial management, human resource capacity, infrastructure and information technology, operational policies and procedures, and quality of service delivery.
4. Quantitative Analysis of Export Data: Our team will assess additional U.S. wheat export sales generated through a mixed-methods contribution analysis that combines quantitative export and funding data with qualitative evidence from USW staff, school leadership, instructors, alumni, millers, bakers, and industry stakeholders. The analysis will reconstruct the chronology of USW support to each baking school, including training activities, technical assistance, curriculum support, demonstrations, equipment investments, and other program expenditures. This activity timeline will then be compared with available data on U.S. wheat exports, country-level wheat imports, domestic market share, and customer or industry purchasing patterns in Jamaica and the Dominican Republic.

The team will also calculate descriptive trends in U.S. wheat export sales to each country over the evaluation period and compare those trends with USW program funding, including MAP/FMD/RAPP resources where data is available. This will allow the evaluation to utilize regression analysis to estimate the ratio of additional U.S. wheat export sales relative to program funding, as requested in the RFP. The analysis will distinguish clearly between documented export sales, estimated additional sales, and sales outcomes that cannot be confidently linked to USW support with available data. Note that the link between program funding and wheat export sales would be tenuous relative to other factors determining wheat exports. An inability to empirically document such a link should in no way be construed as evidence that the program funding is not effective.

Evaluation Matrix

The evaluation matrix in Table 1 on the next page consolidates our proposed data collection methods, sources and types of analyses for each evaluation objective and requirement as well as potential limitations and data risks. The matrix is a key tool for ensuring we collect the right data from the right sources, using the most appropriate quantitative and qualitative methods and analytical techniques. Furthermore, the tool allows TradeMoves and USW to create a shared understanding of the methodology, identify gaps in data or risks, gather feedback, and adjust before data collection begins.

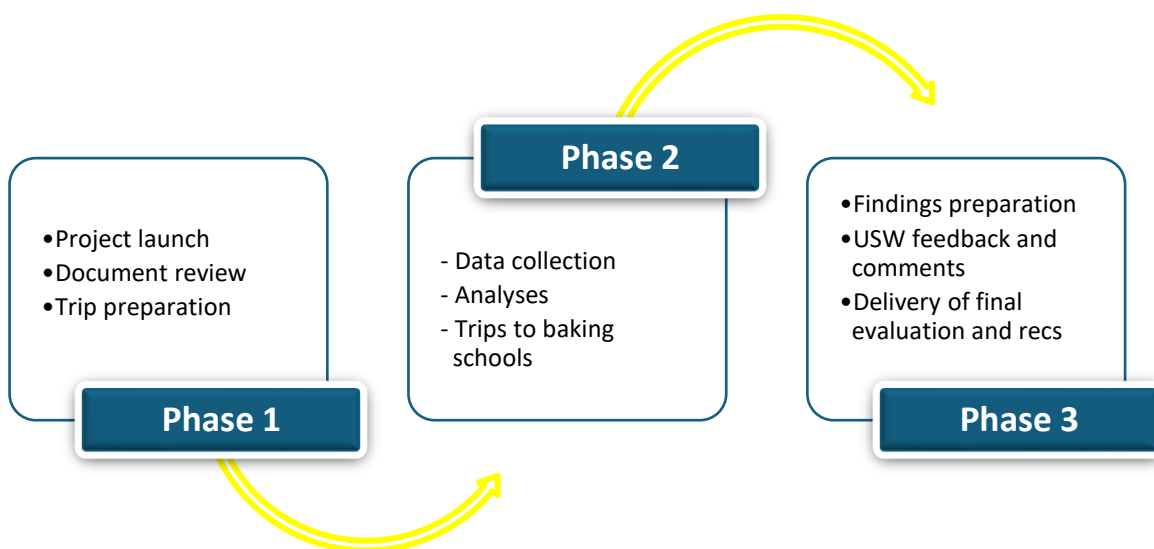

Table 1: Evaluation Matrix

Evaluation Objective	Data Collection Methods	Analysis	Data Sources	Limitations & Data Risks
1. Assess overall effectiveness of USW's efforts to improve quality of wheat-based foods through training, technical assistance, and institutional support to both baking schools	• Desk review of program records • Key informant interviews (KIIs) • Alumni interviews/ or survey • Reported wheat sales from alumni or previous monitoring efforts	• Triangulation of key informant and alumni interview themes with program records	• USW program records (donation dates, costs, technical assistance reports, quarterly/annual reports to USDA) • Training curriculum and participation records (who trained, when, topics covered, satisfaction surveys from schools) • Interviews with USW program managers, baking company leaders, program alumni, course instructors, and others.	• No prior evaluation exists for these or other USW baking schools, so there is a limited baseline for comparison • Need a clear definition of improved quality of wheat-based foods; this must be coordinated with USW • No clear control group or comparison cohort; impact attribution will be qualitative • 20-year recall period significantly limits accuracy of retrospective accounts
2. Analyze the relevance, sustainability, and impact of USW-supported training and capacity-building activities	• Alumni KIIs on skills retention, application, and career outcomes • Baking company head interviews as efficient alumni proxy • Document review of training records and curriculum (where available) • Before/after cohort comparison if data structure permits	• Content and thematic analysis: relevance and skills application themes • Kirkpatrick Model of learning (if data available) • Descriptive statistics: training reach and frequency over 20 years • SWOT synthesis for sustainability dimensions	• Training curriculum and participation records (timing, frequency, attendees, satisfaction surveys, certifications, etc. from schools) • USW strategic plan documents • Interviews across the two countries including: ○ Alumni interviews ○ Baking company leader interviews (proxy for workforce outcomes) ○ USW staff interviews ○ School administrator and instructor interviews	• Alumni sample (~12–15 per country) is small and USW-connected — potential selection bias toward positive outcomes • Sustainability requires institutional financial data which may be too sensitive to share • No control group or comparison cohort; impact attribution will be qualitative • 20-year recall period significantly limits accuracy of retrospective accounts
3. Examine the health and medium/long-term viability of the educational institutions housing the baking schools	• Structured KIIs with school administrators • Document review of institutional documents • Stakeholder perception interviews on institutional standing.	• Qualitative assessment of governance, staffing, and operational risks using elements of organizational capacity assessment tool • Financial sustainability analysis (contingent on budget data availability)	• Interviews across the two countries including: ○ USW staff interviews ○ School administrator interviews ○ Instructor interviews • Institutional documents (annual plans, budgets, enrollment, governance, etc.)	• Institutional financial and enrollment data may not be fully available — this objective may rely almost entirely on qualitative KII data • Contingent on schools being able to share some sensitive documentation and information • USW staff may have limited visibility into internal school operations

Evaluation Objective	Data Collection Methods	Analysis	Data Sources	Limitations & Data Risks
4. Identify market constraints and opportunities related to wheat-based food production in both countries, aligned with USW's approved strategic plan	- Market landscape interviews with baking company heads and industry stakeholders - Review of USW strategic plan for market goals - Secondary data review of wheat/flour trade flows (if pursued)	- Qualitative thematic analysis: market constraints and opportunities by country - Alignment mapping: current conditions vs. USW strategic objectives - Country-level market opportunity summary	- USW strategic plan - Wheat sales/export data provided by USW - Interviews with USW and local stakeholders, such as baking company leaders. - Secondary market data (USITC export value and volume data on wheat and wheat-based products. Potential sources include: Dominican Republic National Office of Statistics; Customs Agency of the Dominican Republic; Jamaica Customs Agency	- Wheat sales data described as partial — may not support robust market sizing - Stakeholder interviews may reflect industry perceptions rather than objective market data
5. Describe additional export sales achieved, including ratio of additional export sales relative to MAP/FMD/RAPP program funding (Eval Requirement #6)	- Econometric regression: program expenditures → U.S. export sales - Attribution/contribution analysis to account for confounding factors - Cost-benefit ratio calculation (export sales generated per \$ of program spend)	- Regression model: marginal export sales per dollar of program investment - Calculation of export sales-to-funding ratio as required by USDA- - Contribution analysis - Sensitivity analysis on key assumptions - Country-level breakdown (Jamaica vs. DR)	- USW wheat sales/export data - Wheat purchase records of baking companies - USW program cost data (training costs, donations, equipment costs) - USW budgets for Jamaica and DR over 20 years, based on MAP/FMD/RAPP program funding. - Baking company leader interviews (qualitative market demand signals)	- Contingent on completeness of wheat sales data - Isolating USW program contribution from other market factors is methodologically challenging. The evaluation team will attempt to control for all other factors, such as price competitiveness, exchange rates, supply and harvest conditions, and geopolitical conditions. - Without a full sales time series, regression results will have wide confidence intervals - This objective has the highest data dependency and the highest risk

II. Approach and Timeline

TradeMoves anticipates implementing the evaluation over the next six months in three phases.

Phase 1: Project Launch, Document Review, and Trip Preparation

Kickoff and Check-ins: At project start, TradeMoves will hold a kickoff meeting with USW to understand the full context of the two programs in Jamaica and the Dominican Republic as well as any program documents and data available over the past twenty years. This kickoff will also provide an opportunity for USW to provide input on the proposed evaluation methodology and for USW and TradeMoves to align on the full scope of resources, stakeholders, and schedule. Following the kickoff, TradeMoves will provide an updated work plan with an updated timeline of activities, and USW will provide TradeMoves with access to program documents and data.

Document Review and Analysis: Prior to any outreach, TradeMoves will conduct a thorough review of program documentation and data. The team will review documentation in order to:

- Examine the USW strategic plan to understand key priorities and objectives
- Orient to how the programs were implemented, monitored, and performed over the twenty-year period through examining prior progress reports, training curriculum, and target audience.
- Assess the completeness of existing program data and any data gaps that may affect the methodology, specifically data regarding wheat export sales, pricing, participating baker sales, health and viability of the baking schools and educational institutions.
- Map out key stakeholders, participants, chronology of activities, and associated program costs
- Explore applicability of external data sources such as trade flows, wheat prices, and other economic statistics to complement program details

Data Collection Tools: The evaluation team will develop interview guides and other tools, if needed, to facilitate interviews and meetings with different stakeholder groups. The guides will help ensure we ask the right questions, collect the best possible data, and maximize the usefulness of the interviews and time spent in the country. The tools will be in English for Jamaica and English and Spanish for the Dominican Republic.

Phase 2: Data Collection, Analysis, and Trips to Jamaica and the Dominican Republic

Data Collection: We will conduct fieldwork trips to both Jamaica and the Dominican Republic, targeting July and August respectively. In advance, TradeMoves will conduct virtual interviews with USW stakeholders to ground our understanding of Jamaica and the Dominican Republic programs, validate information from the document review, and understand USW’s perspective on the strengths, weaknesses, and areas of improvement for the program. We would also rely on USW’s support in making introductions to key stakeholders for both programs.

Following introductions, TradeMoves will build a schedule of meetings, interviews, and visits to relevant institutions in coordination with them. We anticipate spending one week in each country, with most meetings happening in the respective capital cities. With the permission of participants, interviews will be recorded to improve accuracy and clarity.

Data Analysis: In parallel with the trips to Jamaica and the Dominican Republic, the team will be analyzing the collected data using the techniques described in Section I Evaluation Methodology and Table 1: Evaluation Matrix. The team will also pull in findings from the document review and conduct a quantitative analysis.

Phase 3: Preparing the final report and incorporating USW feedback

Report Writing: The report will include a concise executive summary, a description of the methodology and address each of the evaluation requirements outlined in the RFP. The report will include evidence-based findings and conclusions for each evaluation objective will provide a practical and actionable set of recommendations to improve future programs. While this will be a single report, it will provide separate findings, conclusions and recommendations for two country programs. At the same time, the report will identify where findings and recommendations are similar across the two country programs.

TradeMoves will deliver the first draft of the report in October 2026 for USW’s feedback. Following USW comments, TradeMoves will incorporate feedback to develop a final version no later than 31 October 2026.

OUR TEAM

Andrew Dicello / Evaluation Team Lead

Andrew will lead the USW program evaluations for each of the baking will travel to Jamaica and the Dominican Republic to conduct stakeholder interviews. He will apply both quantitative and qualitative methods in designing and executing the evaluation.

Andrew has over 25 years of consulting, project management, and senior leadership experience with clients including USDA, FDA, and USAID. He is an expert in monitoring and evaluation (M&E) and has conducted and supervised dozens of studies, assessments, and performance and impact evaluations covering a wide range of programs and sectors, from economic growth, agricultural assistance, and trade to education, democracy promotion and humanitarian assistance. As a Technical Director at MSI and Vice President and IBI, he oversaw large M&E support contracts for USAID in Honduras, Colombia, Venezuela, Haiti and the Caribbean. He worked closely with demanding clients and evaluation teams to ensure the use of tailored evaluation designs incorporating mixed methods, and quasi-experimental methodologies, as appropriate. Andrew also brings a depth of experience in organizational capacity building, including designing and delivering hundreds of courses and workshops for corporations, small businesses, non-governmental organizations (NGOs), foundations and government agencies. He has used a range of tools and techniques to measure training effectiveness, learning and organizational capacity.

Andrew is a fluent Spanish speaker with experience in Chile, Colombia, Paraguay, Mexico, El Salvador, Costa Rica, and Honduras. Andrew has an MBA from the Thunderbird School of Global Management and a Bachelors from the University of Notre Dame.

Dan Killian/Senior Monitoring & Evaluation Specialist

Dan Killian will support the team as a senior monitor and evaluation specialist, leveraging statistical analysis and econometric techniques to conduct quantitative analysis for the program evaluation.

Dan is a learning, monitoring, and evaluation specialist with more than 20 years of experience designing and leading MEL systems and impact evaluations, including econometric analyses, across countries in the Middle East, North Africa, and South Asia. He has served as a Monitoring and Evaluation Specialist at MSI, International Development Law Organization (IDLO), and ACDI/VOCA over the span of his career. His work includes major evaluations and baseline studies for USAID, U.S. State Department, and private-sector partnerships. He holds a Masters of Arts in Applied Economics from Johns Hopkins University and an MFA in Creative Writing from Columbia College. Dan is proficient in R, Python, Stata, and SPSS.

Shawn Marie Jarosz / Chief Trade Strategist

Shawn will provide strategic and technical direction to the project related to cross-border trade as well as USDA and USW export promotion priorities. Shawn's tenure spans nearly 30 years supporting export initiatives for U.S. food/ag companies and Cooperators and managing global sourcing/supply strategies on behalf of U.S. companies of all sizes and related industry associations. Shawn has been a U.S. Licensed Customs Broker (LCB) since 2007 and a Certified Global Business Professional

(CGBP). Shawn received her Bachelors from the University of Michigan and her MBA from the George Washington University where she was awarded the Wolcott Fellowship in International Business.

Chelsea Hamati / Project Manager

Chelsea will assist with logistics, deliverable development, research, and review. Chelsea is an international trade and development project management professional with 8 years of experience working on capacity building, agriculture trade, small business development, and ecommerce projects. She brings a variety of management and technical skills in data analysis, impact evaluation, and activity design and implementation. Her trade and regulatory research background coupled

with her practical project experience in Latin America brings an additional qualitative lens to complement the evaluation. Chelsea speaks Spanish and has her Masters of Arts in International Trade and Investment Policy from the George Washington University.

CVs for team available upon request.

BUDGET ESTIMATE & PROPOSED PRICING STRUCTURE

We view these as two independent evaluation workstreams as part of one deliverable. At the same time, we recognize that there will be synergies in conducting these evaluations simultaneously. We propose a budget that takes into consideration the overlap of resources and efficiencies gained as a result.

	Total	May-26	Jun-26	Jul-26	Aug-26	Sep-26	Oct-26
Total Project Cost	\$ 74,750	\$ 11,113	\$ 8,230	\$ 16,324	\$ 15,493	\$ 11,795	\$ 11,795
Team Hours	700	117	83	132	126	121	121
Fees	\$ 68,259	\$ 11,088	\$ 8,205	\$ 13,154	\$ 12,272	\$ 11,770	\$ 11,770
Travel cost - Jamaica	\$ 3,145	\$ -	\$ -	\$ 3,145	\$ -	\$ -	\$ -
Travel cost - Dominican Republic	\$ 3,196	\$ -	\$ -		\$ 3,196	\$ -	\$ -
Other costs	\$ 150	\$ 25	\$ 25	\$ 25	\$ 25	\$ 25	\$ 25
Third-party Fees	\$ -	\$ -	\$ -	\$ -	\$ -	\$ -	\$ -

Dominican Republic	\$ 40,813	\$ 6,111	\$ 4,525	\$ 7,247	\$ 9,958	\$ 6,486	\$ 6,486
Team Hours	385	64	46	73	69	67	67
Fees	\$ 37,542	\$ 6,098	\$ 4,512	\$ 7,235	\$ 6,749	\$ 6,474	\$ 6,474
Travel (Washington - Santo Domingo)	\$ 3,196	\$ -	\$ -	\$ -	\$ 3,196	\$ -	\$ -
Other Cost	\$ 75	\$ 13	\$ 13	\$ 13	\$ 13	\$ 13	\$ 13
Third-party Fees	\$ -	\$ -	\$ -	\$ -	\$ -	\$ -	\$ -

ANNEX A: TECHNICAL EXPERTISE & PREVIOUS PROJECTS

Experience with Program Evaluation and Assessments: Our specialists have conducted program evaluations and similar program assessments in the past for international projects around the world. These are a few of the studies they have undertaken for other clients. We have linked to samples of studies throughout as well as in this [linked folder](#), though please note not all studies can be shared due to confidentiality:

Case study evaluation of USDA's Agricultural Trade Promotion Program

In 2022, TradeMoves conducted a [qualitative case study analysis](#) for the U.S. Grains Council, Distilled Spirits Council of the United States, U.S. Highbush Blueberry Council, and the USA Poultry and Egg Export Council. The purpose of the analysis was to evaluate how USDA Agricultural Trade Promotion (ATP) funds were used by USDA Cooperators and recommendations for future market development and export promotion funds. TradeMoves conducted interviews with fourteen different cooperators receiving ATP funds and generated case studies for each cooperator (including U.S. Wheat Associates) highlighting the challenges U.S. exporters face in overseas markets, summarizing Cooperators' approach to leverage additional funds and regulatory flexibilities, and outlining observations and outcomes. Recommendations included extending ATP's regulatory flexibilities to reimburse a wider variety of expenses, provide longer time horizons to use fundings, and maintain the expanded size criteria for branded programs to help a greater number of U.S. small to medium sized exporters.

Performance measures and program strategies for USDA's Foreign Agricultural Service

USDA's Office of Capacity Building and Development requested consulting services to build the monitoring and evaluation capacity of the Food for Progress and agricultural extension programs. Andrew Dicello guided USDA staff through a strategic planning process to develop results frameworks (logic models) for their programs. The frameworks articulated the key outcomes to be achieved along with intermediate results. In collaboration with USDA staff, the team developed an [extensive handbook](#) of performance measures for each result, including data collection methods and rationale for use. The handbook was used by the USDA staff and their grantees to measure and monitor program outcomes, such as improved agricultural productivity, increased farmer knowledge of advanced agricultural techniques and technologies, and increased access to market information.

Sustainability Framework for USAID

Andrew Dicello conducted a [desk review](#) for USAID/Kenya and East Africa (USAID/KEA) which aimed to provide a framework for designing sustainable programs. The framework would serve as a key tool to inform the next Country Development Cooperation Strategy (CDCS) and shape future project designs. The qualitative study included a comprehensive review of documents across 15 projects, agency policy and strategy documents, and more than a dozen interviews with USAID program officers. Drawing from a thematic analysis of lessons learned and best practices in promoting sustainability, Andrew developed a robust framework that identified common program elements to be sustained after USAID support ends, such as the ongoing provision of goods and services, processes, systems, behaviors and norms, as well as newly established companies and organizations. It also identified core drivers of sustainability such as local ownership, organizational capacity, financial capacity, enabling policy environment and citizen/customer demand. Lastly, it outlined cross-cutting factors and conditions that can impact sustainability, such as economic and political stability of a region, and the perceived reputation and credibility of organizations and systems in the eyes of the public.

Evaluation of the Global Innovation through Science and Technology (GIST) initiative

The Global Innovation through Science and Technology (GIST) initiative was a U.S. Department of State program designed to empower science and technology entrepreneurs across more than 130 emerging economies. Dan Killian served as the Senior Evaluator, conducting an evaluation of pitch competitions from 2011-2019 to determine whether mentorship and cash support for finalists or winners improved subsequent business outcomes. The evaluation team reviewed nine years of administrative data,

deployed an online survey to the population of 3,000 applicants, and conducted in-depth interviews with 16 finalists and winners. Using a difference-in-differences regression analysis, Dan and the evaluation team found that finalists and winners realized higher revenue and profit streams relative to applicants. Qualitative inquiry further documented that applicants found significant value in the networking and mentorship available to all applicants, even without receiving cash prizes.

Evaluation of the Chevron Bangladesh Partnership Initiative

In 2015, Chevron launched the \$10 million Bangladesh Partnership Initiative (BPI), a package of interventions for strengthening household livelihoods through both enterprise development and workforce development activities, and which included a real-time evaluation component across the period of performance. Dan was the Evaluation Team Lead and worked with the team to track beneficiary and non-beneficiary households using a four-wave panel study conducted in rural communities surrounding Chevron gas plant operations, with data collected in 2017, 2019, 2023, and 2025. The estimation models utilized village and wave fixed-effects while controlling for household size, shock exposure, and distance to the nearest gas plant. Callaway and Sant'Anna dynamic difference-in-differences estimators were also applied to the balanced panel to assess treatment effect trajectories over time. Across all model specifications, the regression analysis found that beneficiary households experienced 30-40 percent gains in total household income. This increase in incomes exceeded the cost of Chevron's investment within five years, representing a return on investment of 33 percent and an annual internal rate of return of 14 percent.

Experience with U.S. Cooperators and Export Promotion Programs: TradeMoves has supported USDA Cooperators since 2006, tackling a variety of projects that involved data review, market analyses, and interviews with key stakeholders on priorities and challenges. The majority of workstreams were tied to export promotion funding programs including MAP, ATP, RAPP and TASC. We have worked with the following Cooperators:

Cooperator	Expertise and Deliverables	Years
USDEC	Annual updates to USDEC Export Guide covering tariffs, taxes, quotas, import documentation, veterinary and sanitary certificates, product inspection, facility/product registration, labeling and packaging requirements and standards of identity for U.S. dairy exports shipped to more than 40 export markets.	2006 – Present
Food Export	Created 20 different quick reference sheets covering key product groups in three markets (Egypt, Morocco and India) including information on market opportunities, competitive landscape, tariff and tax considerations, and an overview of key import requirements.	2025, 2026
